

# ACTUATOR

## MGV Series (Electrical Multi-Turn Actuator)

### Model Number: MGV Series

#### DESCRIPTION

- The MGV Series Actuator is a high-performance, multi-turn and part-turn actuator designed for reliable operation in industrial and hazardous environments. Engineered with advanced technology, the MGV Series offers robust mechanical construction, non-intrusive controls, and a suite of protection systems for enhanced performance and durability.
- Constructed with high-quality aluminum alloy for durability and excellent corrosion resistance
- With reliable and stable operation, the MGV Series is used in many industries Oil & gas/Powerplant/ Chemical & petrochemical/ Water /Marine & shipbuilding

#### TECHNICAL FEATURES

##### 1. Non-Intrusive Design Concept:

The MGV series actuators incorporate a non-intrusive design, characterized by:

The use of magnetic steel to control the Hall element for the mode selection and local operation knobs, replacing the traditional mechanical shaft knobs. An infrared setter for parameter setting, adjustment, and debugging, all performed without needing to open the actuator casing.

##### Advantages of this non-invasive design include:

- Protection from environmental factors such as dust, harmful gases, and moisture.
- The ability to debug even in harsh conditions, such as rain or the presence of flammable gases.
- Easy access to actuator status, which can be quickly queried.

##### 2. Comprehensive Protection Features:

- Torque Protection:** Prevents over-torque during actuator operation to avoid valve stem damage and actuator wear. The torque protection value is customizable through the menu.
- Valve Position Limit Protection:** Automatically stops the actuator when it reaches the valve's closed or open limit, based on the configured working mode.
- Instantaneous Reverse Protection:** When an opposite command is received, a time delay is implemented to prevent unnecessary wear on the valve shaft and gearbox.
- Power Supply Phase Loss Protection:** Monitors the three-phase power to prevent motor damage caused by a phase loss.
- Valve Jam Protection:** If the actuator doesn't move within 5-10 seconds after receiving the control signal, the motor's power supply is cut off to avoid damage.
- Overheat Protection:** Thermal relays detect overheating in the motor windings. If overheating occurs, the control circuit disables the actuator to protect the motor.

##### 3. Status Recording:

The actuator records important operational data:

- Power-on times:** Tracks the number of times the actuator is powered on.
- Opening and closing times:** Tracks the number of times the valve is opened and closed.
- Ambient temperature:** Records the highest and lowest temperatures the actuator has experienced when powered on.

##### 4. Fieldbus Control:

Utilizing fieldbus technology, the MGV actuator can communicate within a control system, allowing for full digitalization and bidirectional communication. It supports open international standards such as:

- Modbus
- Profibus
- FF (Foundation Fieldbus)
- HART

This ensures interoperability among instruments from different manufacturers and enables distributed control systems.

##### 5. Debugging and Troubleshooting:

The MGV series actuators feature an infrared setting tool for easy and fast debugging, without needing to open the casing. This tool simplifies fault diagnosis and displays a range of internal actuator statuses.

It allows users to configure:

- Positive/negative effects of the actuator when closed
- Open/close limit protection settings
- Language selection (English)
- Local control mode selection
- Trigger settings for six status indication relays
- Emergency action functions
- Analog control signal settings
- Torque protection value adjustment
- Analog feedback signal adjustments

## MGV Series (Electrical Multi-Turn Actuator)

### Model Number: MGV Series

#### STANDARD CONFIGURATION

|    |                                |  |
|----|--------------------------------|--|
| 1  | Protection Degree              | Weatherproof enclosure IP67  |
| 2  | Power Supply                   | Single phase: 220VAC 50/60Hz,<br>Three phase: 380VAC 50/60Hz                                       |
| 3  | Working Duty (On-off Type)     | S2: 10min~30min, S4: 20~50%, Maximum 600 times/hour  |
| 4  | Working Duty (Modulating Type) | S4: 30~50%, 300-1200 Start/Hour, Maximum 1200 times/hour   |
| 5  | Motor                          | Fully enclosed squirrel-cage induction motor, F-class  |
| 6  | Contact Feedback               | Fully open/fully closed position, open over-torque/close over-torque, remote, fault (configurable) |
| 7  | Overheat Protection            | Motor overheat protection (150° C±5°C ON, 97° C±5° C OFF)  |
| 8  | Stroke                         | 5-500  |
| 9  | Position Indication            | LCD display  |
| 10 | Torque Protection              | Electronic   |
| 11 | Self-locking Function          | YES  |
| 12 | Manual operation               | Declutchable manual override   |
| 13 | Cable Interface                | 2*1" +1*1.5" NPT or metric 2*M25 +1*M40  |
| 14 | Valve Stem Connection          | Three-claw   |
| 15 | Flange Connection              | ISO5210  |
| 16 | Ambient Temperature            | -20°C~+70°C  |
| 17 | Ambient Humidity               | Minimum relative humidity 10%, Maximum relative humidity 95%, No condensation                      |
| 18 | Housing                        | High-pressure aluminum alloy housing with hard anodizing and powder coating                        |
| 19 | Torque                         | 14-3000NM  |

#### OPTIONAL CONFIGURATION

|    |                          |   |
|----|--------------------------|---|
| 1  | Explosion-proof type     | Exd IIIB4 ExdIICT4  |
| 2  | Advanced protection type | IP68 (submersible)  |
| 3  | Stem connector           | Keyway Copper Threaded Five-Claw  |
| 4  | Bus control              | Hart Modbus Profibus FF   |
| 5  | Space heater             | Automatic temperature adjustment (for use in low temperature environments)  |
| 6  | Power supply:            | Single phase: 110VAC 230VAC 50/60Hz<br>Three-phase: 220VAC 400VAC 415VAC 440VAC 50/60HZ and other special voltages  |
| 7  | Split type               | The actuator is divided into the execution part and the control part, which are installed on site and in the safety area respectively and connected by cables |
| 8  | Bevel gearbox            | Reduce the speed to get greater output torque   |
| 9  | Torque                   | Torque range 3000~20000 (with reduction gearbox)  |
| 10 | Ambient temperature      | -40° C~+70° C (low temperature type) -20° C~+80° C (high temperature type)  |

|                  | Stall Current A  |      | 78   |      |      |      |      |      |      |
|                  | Rated Current A  |      | 22   |      |      |      |      |      |      |

\*Because over fast sliding deceleration can speed up the damage of drive shaft sleeve, be cautious to choose rotate speed when mounting gate valve directly
